

Radiant QuikCalc

Independent MU checks, radiobiology, and treatment-gap math.

IN DEVELOPMENT

QuikCalc is on the build queue. Modules — TG-114 MU verify, linear-quadratic radiobiology, Orton-Ellis TDF gap, and general bench tools — are scoped; deployment targets a local web app like QuikQA.

WHAT IT DOES

Four calculation modules in one local web app: TG-114 hand calculation MU verification (with the $\pm 3\%$ / $\pm 5\%$ tolerance table), BED / EQD2 radiobiology via the linear-quadratic model with an editable α/β reference table, Orton-Ellis TDF gap evaluation matching the EQD2/TDF decay workbook, and a general-tools tab (inverse-square, P_TP, prior-decay references). Every tab produces a Radiant-branded PDF report ready to drop into the chart.

KEY CAPABILITIES

TG-114 MU Verify

Hand-calculation method, $\pm 3\%$ action / $\pm 5\%$ fail tolerances.

LQ Radiobiology

BED + EQD2 with unlimited prior courses, editable α/β table.

Orton-Ellis TDF Gap

Treatment-gap evaluation matching the decay workbook bit-for-bit.

General Tools

Inverse-square, P_TP correction, prior-decay references.

Branded PDF Reports

Every tab outputs a PDF, ready for the chart.

ESAPI-Free

Local web app, pure manual entry, nothing to install.

WHO IT'S FOR

- Clinical medical physicists doing independent MU checks
- Reirradiation and treatment-gap evaluation
- Bench calculations off-network

- Physics residents and students

HOW TO GET ACCESS

QuikCalc is not yet deployed. To request early-access or to be added to the launch notification list, email info@Radiant-MPC.com.
