

Radiant QuikDose

EQD2 / BED dose accumulation inside Eclipse — two ESAPI binary plugins.

ECLIPSE PLUGIN QuikDose ships as two ESAPI binary plugins for Varian Eclipse v15.6 — QuikDoseHDR.esapi and QuikDoseEBRT.esapi — available from the password-protected download area.

WHAT IT DOES

Two focused Eclipse plugins sharing the same linear-quadratic radiobiology. QuikDoseHDR tracks an HDR brachytherapy course per-fraction with remaining-budget back-conversion to a physical dose per fraction. QuikDoseEBRT computes voxel-level cumulative EQD2 for re-irradiation — prior in-Eclipse and Velocity-imported courses summed onto the current planning CT with per-OAR α/β assignment, traffic-light compliance against published retreatment constraints, DVH overlays, and DICOM RTDOSE export of the cumulative distribution.

KEY CAPABILITIES

HDR Tracking

Per-fraction EQD2/BED, remaining-budget back-conversion.

EBRT Cumulative

Voxel-level cumulative EQD2 with per-OAR α/β .

Constraint Checks

Traffic-light against Timmerman / Jereczek-Fossa / QUANTEC.

Plain LQ Radiobiology

Standard EQD2 / BED equations, recovery factors explicit.

Read-Only ESAPI

Runs on the ARIA-authenticated workstation; no PHI leaves the clinic.

DVH + DICOM Export

Shared-axis DVH overlays + cumulative RTDOSE for re-import.

WHO IT'S FOR

- Re-irradiation planning and review
- HDR brachytherapy programs

- Eclipse v15.6 plugin clinics
- Cumulative-dose decision support

HOW TO GET ACCESS

QuikDose binary plugins live in the password-protected download area at radiant-mpc.com. For a copy and the approval checklist, email info@Radiant-MPC.com.
