

Radiant QuikScript

Custom ESAPI scripting for Eclipse v15.6 — prompt-built or legacy converted.

CONSULTING SERVICE

QuikScript is delivered as a consulting engagement: Radiant builds, converts, validates, and packages the ESAPI binary plugins your program needs. Engagement starts with a scoping call.

WHAT IT DOES

Two delivery modes. (1) Prompt-to-script: describe the check in plain language — "flag any PTV above 110% of prescription" — and Radiant builds the complete Eclipse binary-plugin project, ready to compile. (2) Legacy converter: drop in an existing single-file .cs plugin script and Radiant rebuilds it as a modern binary plugin with a WPF interface, Radiant-branded PDF reports, CSV export, ARIA connectivity, and a side-by-side diff so no clinical logic changes silently.

KEY CAPABILITIES

Prompt-to-Script

Plain-language description in, compileable plugin project out.

Legacy .cs Converter

Single-file script in, modern binary plugin out, with diff.

Template Library

Curated DVH extractors, naming checks, plan-sum analysis.

ARIA Connectivity

Reusable read-only ESAPI ScriptContext layer.

Modern Outputs

WPF interface + Radiant-branded PDF + CSV + timestamped log.

Compile + Package

Local build, auto-repair loop, deploy-ready .esapi.dll.

WHO IT'S FOR

- ESAPI script authors and consultants
- Clinics modernizing legacy scripts

- Eclipse v15.6 plugin development
- Chart QA and plan-check automation

HOW TO GET ACCESS

QuikScript is a consulting engagement, not a packaged product. To scope a script-build or legacy-conversion project, email info@Radiant-MPC.com.
