

Radiant QuikShield

NCRP 151 vault shielding design with annotated drawings and a clinic-ready report.

IN DEVELOPMENT

QuikShield is on the build queue. The NCRP 151 engine, drawing-calibration tool, step-by-step audit trail, and Word reporting layer are scoped; deployment targets a workstation-local app.

WHAT IT DOES

Implement the NCRP Report 151 worked-example methodology as a guided workflow. Calculate primary barriers, secondary leakage and scatter, neutron shielding at 10 MV and above, and maze/door. Drop in a PDF or PNG plan view, set the scale with two clicks, then click the points of interest — distances and scatter angles compute automatically. Every barrier shows its formula, the substituted values, the result, and the NCRP citation. Generates a Word report with the annotated drawing embedded.

KEY CAPABILITIES

NCRP 151 Engine

Primary + secondary + neutron + maze/door.

Drawing Calibration

Two-click scale + click-to-place points of interest.

Step-by-Step Audit Trail

Formula, values, result, NCRP citation per barrier.

Clinic-Ready Reports

Word report with annotated drawing embedded.

Editable Reference Data

All NCRP tables in inspectable JSON, adjustable without code.

Optional AI Sanity Check

Plain-language review pass; every calculation works without it.

WHO IT'S FOR

- Clinical medical physicists

- New-vault and renovation projects
- Facility planners and architects
- Shielding-report review

HOW TO GET ACCESS

QuikShield is not yet deployed. To request a pilot or join the launch list, email info@Radiant-MPC.com.
