

CLINICAL TOOL / LOCAL WEB APP

Radiant QuikBolus

From DICOM RT Structure Set to printable bolus STL in minutes.

Who it's for: Built for clinical physicists and dosimetrists running an in-house 3D-printing program for custom bolus.

KEY FEATURES

- **DICOM RT Import.**
Reads the RT Structure Set and auto-detects Body / External and Bolus ROIs — no manual tagging.
- **Base Plate Fitting.**
Welds a flat base of your chosen thickness onto the air-side face with a clean boolean union.
- **Interactive 3D Preview.**
Inspect bolus against patient body surface before export, then open a branded, fully offline 3D viewer.
- **Solid Mesh Reconstruction.**
Rasterizes contours into a voxel volume, interpolates inter-slice gaps, and runs marching cubes with smoothing.
- **Guaranteed Watertight.**
Voxel-remeshes any non-sealed result into a closed manifold so the exported STL is always printable.
- **Print-Ready STL.**
Binary or ASCII STL dropped to the print bed, with a clinical stats report of dimensions and volume.
