

CLINICAL TOOL / WEB CALCULATOR

Radiant QuikDose Calculator

Browser-based EQD2 / BED accumulation and remaining-budget calculator.

RADIANT QUIKDOSE CALCULATOR

Browser-based EQD2 / BED accumulation and remaining-budget calculator.

Who it's for: Built for physicists who need a quick, bench-style cumulative EQD2 / BED check without firing up Eclipse.

KEY FEATURES

- **EQD2 / BED Conversion.**
Convert any prescription to its EQD2 or BED with explicit per-fraction dose and alpha/beta entry.
- **Remaining-Budget Back-Conversion.**
Given a cumulative constraint and a course already delivered, back-convert the budget left to a physical dose-per-fraction.
- **Branded PDF Output.**
Print or save a clean, Radiant-branded summary of the inputs, intermediates, and result.
- **Cumulative Dose Summation.**
Add prior courses fraction-by-fraction onto a target OAR with recovery-factor support.
- **Linear-Quadratic Math, Shown.**
Every line shows the substituted values — the same equation a physicist would check by hand.
- **Runs Anywhere.**
Modern browser, off-network — nothing to install, nothing to send to the cloud.
