

CLINICAL TOOL / ECLIPSE BINARY PLUGIN

Radiant QuikDose

EQD2 and BED dose accumulation for Varian Eclipse v15.6.

RADIANT QUIKDOSE

EQD2 and BED dose accumulation for Varian Eclipse v15.6.

Who it's for: Built for medical physicists supporting re-irradiation review and HDR brachytherapy programs inside Eclipse.

KEY FEATURES

- **HDR Brachytherapy Tracking.**
Per-fraction EQD2 and BED accumulation across an HDR course in a spreadsheet-style layout, with remaining-budget back-conversion.
- **External-Beam Cumulative EQD2.**
Voxel-level cumulative EQD2 — prior in-Eclipse and Velocity-imported courses summed onto the current planning CT.
- **Radiobiology, Shown Plainly.**
Standard linear-quadratic EQD2 / BED with explicit per-fraction dose and time-dependent recovery factors.
- **DVH Overlays & DICOM Export.**
Prior, current, and cumulative EQD2 on shared DVH axes, plus DICOM RTDOSE export for re-import into Eclipse.
- **Retreatment Constraint Checks.**
Traffic-light compliance against Timmerman SBRT, Jerezek-Fossa pelvic, and QUANTEC retreatment supplements.
- **Runs Inside Eclipse.**
Read-only ESAPI binary plugins for Eclipse v15.6. No database wiring; no PHI leaves the clinic.
