

CLINICAL TOOL / LOCAL WEB APP

Radiant QuikRAM

HDR & radioactive-materials management with TG-43 dose calculator and audit-ready reports.

The screenshot displays the Radiant QuikRAM web application interface. At the top, there is a navigation bar with tabs: Inventory, Source Models, Well Chambers, HDR Source Exchanges, TG-43 Calc, Decay Table, Reports, and LOCAL-FIRST - SQLITE. The main content area is divided into two sections. The top section, titled 'MODEL', shows details for a specific source with fields for Serial number, Location, Status, Cal date, Initial S_K (U), Current S_K (2026-05-23), Install date, HDR source exchange due, Removed / disposed, and Notes. Below this is a table titled 'HDR source exchanges involving this source' with columns for Exchange date, Source out, Source in, Well chamber, Expected S_K , Measured S_K , Δ , and Performed by.

Who it's for: Built for HDR/brachytherapy medical physicists and Radiation Safety Officers responsible for sealed-source possession.

KEY FEATURES

- **Source Inventory.**
HDR Ir-192 / Co-60, LDR Cs-137 historicals, I-125 / Pd-103 / Cs-131 seed lots, and Cs-137 check sources in one inventory.
- **HDR Source-Change Log.**
Every swap recorded: out, in, well-chamber verification, expected vs measured S_K , performed by, witness, and paperwork.
- **Printable Reports.**
Inventory snapshot, source-change audit trail, and per-source decay history — clean for the source binder and NRC inspections.
- **Automatic Decay Tracking.**
Per-source air-kerma strength decay-corrected from the calibration date — today's activity is one click away.
- **TG-43 Dose Calculator.**
Line-source geometry, dose-rate constant Λ , radial dose function $g_L(r)$, and perpendicular-axis dose-rate output.
- **Local-First.**
SQLite on the QA workstation — no cloud, no IT involvement. Same engine for standalone Windows and local web app.
