

CLINICAL TOOL / WINDOWS DESKTOP

Radiant QuikScript

AI-prompt script builder for Varian Eclipse v15.6 — prompt-to-plugin, with legacy conversion.

RADIANT QUIKSCRIPT

AI-prompt script builder for Varian Eclipse v15.6 — prompt-to-plugin, with legacy conversion.

Who it's for: Built for the medical physicist who writes ESAPI scripts for their clinic or for client sites.

KEY FEATURES

- **Prompt-to-Script Builder.**
Describe the check in plain language — QuikScript generates a complete Eclipse binary-plugin project, ready to compile.
- **Template & Component Library.**
Curated building blocks — DVH metric extractors, structure-naming checks, plan-sum analysis, report sections.
- **Modern Outputs.**
Generated plugins ship with a real WPF interface plus Radiant-branded PDF reports, CSV export, and a run log.
- **Legacy .cs Converter.**
Drop in an existing single-file plugin and QuikScript rebuilds it as a modern binary plugin — with a side-by-side diff.
- **ARIA Connectivity.**
Reusable layer for patient, course, plan, and structure data through ESAPI ScriptContext, with a gated read-only ARIA path.
- **Compile, Validate & Package.**
Builds the project locally, feeds errors back for auto-repair, hands you a ready-to-deploy .esapi.dll with an approval checklist.
