

CLINICAL TOOL / LOCAL WEB APP

Radiant QuikShare

HIPAA-conscious, AES-256 encrypted DICOM transfer with a full accounting-of-disclosures audit trail.

Who it's for: Built for clinical physicists who need to share complete planning datasets with another clinical center.

KEY FEATURES

- **Patient-Safe Scanning.**
Inventories every DICOM file, identifies the patient, and refuses to proceed if files from multiple patients are mixed.
- **Random Passphrase.**
Generates a 20-character cryptographically random passphrase with phone-friendly verbal formatting.
- **Integrity Verification.**
Includes a SHA-256 integrity hash and drafts the recipient email automatically.
- **AES-256 Encryption.**
Builds an encrypted .7z archive with header encryption — even the filenames inside are hidden.
- **OneDrive Delivery.**
Uploads the archive to OneDrive for Business and creates an expiring sharing link.
- **HIPAA Audit Trail.**
Dual-location audit record for accounting-of-disclosures; passphrases stored only as salted hashes.
